

Kubernetes

Google Kubernetes Engine (GKE)

Google Kubernetes Engine

GKE stands for Google Kubernetes Engine, which is a managed Kubernetes service provided by Google Cloud Platform (GCP). GKE allows you to deploy, manage, and scale containerized applications using Kubernetes without having to manage the underlying infrastructure manually.

Key features:

- Load Balancing
- Scalability
- Security
- Monitoring and Logging
- Multi-region support

Connecting with GKE

Step 1: Create a Kubernetes Cluster using GKE

1. Create an Account on Google Cloud
2. Enable the [Google Kubernetes Engine API](#).
3. Create a Kubernetes Cluster

Step 2: Connect with GKE from your local machine

1. Install the [gCloud CLI](#)
2. Install the [gke-gcloud-auth-plugin](#)
`gcloud components install gke-gcloud-auth-plugin`
3. Connect with your Kubernetes Cluster
`gcloud container clusters get-credentials <CLUSTER_NAME> --
region=<REGION_NAME>`
